## Canada ✕

### Artificial Intelligence and Data Act (AIDA) is a proposed law using a modified risk-based approach.

Federal: Directive on Automated Decision-Making

- Only applies in the public federal sector
- Involves assessment, transparency and quality assurance requirements

### Bill C-27 Introduction of the Consumer Privacy Protection Act (the "CPPA"):

- The same Bill that proposes the introduction of the Artificial Intelligence and Data Act
- It would repeal parts of the Personal Information Protection and Electronic Documents Act and replace them with a new legislative regime governing the collection, use, and disclosure of personal information for commercial activity in Canada
  - Under s. 62(2)(c), organizations must make available "a general account of the organization's use of any automated decision system to make predictions, recommendations or decisions about individuals that could have a significant impact on them"
  - Under s. 63(3), if an organization has used an automated decision system to make a prediction, recommendation or decision about an individual that could have a significant impact on them, the organization must, on request by the individual, provide them with an explanation of the prediction, recommendation or decision. The explanation must indicate the type of personal information that was used to make the prediction, recommendation or decision, the source of the information and the reasons or principal factors that led to the prediction, recommendation or decision.

### Quebec:

#### Bill 64 – The Act to Modernize Legislative Provisions respecting the Protection of Personal Information

- Amends the Act Respecting the Protection of Personal Information in the Private Sector
- Has received Royal Assent and comes into force September 22, 2023
- Adopts the right to object to the use of personal information being used to render a decision based exclusively on automated processes, and certain rights to information regarding such processes

### Ontario:

#### Ontario's Trustworthy Artificial Intelligence Framework

- The public consultation period ran from May 7 to June 4, 2021
- Focus is on the use of AI by the Government of Ontario
- Suggests that Ontario will use AI in a way that is transparent, secure and equitable
- Although there is no explicit commitment to regulating AI in the private sector, this suggests that the Government of Ontario recognizes AI as an emerging issue

## Colombia

The objective of the policy is increasing the creation of social and economic value through the digital transformation of the public sector and the private sector, through the reduction of barriers, the strengthening of human capital and the development of enabling conditions, so that Colombia can take advantage of opportunities and face the 4IR related challenges. Colombia has adopted a smart regulation approach as a way to overcome this impasse, protecting Colombians without generating regulations that hinder economic development. The country has implemented the smart regulation approach through regulatory sandboxes and innovation hubs, which promote innovation and economic dynamism while overcoming information asymmetries and protecting users' privacy.

**France** [Close]

The Artificial Intelligence Act a proposed law for EU countries. The National Strategy for AI aims at implementing the recommendations of Cédric Villani report on AI (March 28th 2018). It is composed of an ambitious national program dedicated to research, numerous policies dedicated to AI dissemination in the economy and the administration, and several initiatives to encourage trustworthy AI. The article on AI regulatory sandboxes has been "considerably shortened and simplified in order to provide more flexibility for the member states when establishing such sandboxes," reads the introductory note to the compromise document obtained by EURACTIV. The text goes back to provisions previously proposed by the French to avoid putting too many constraints on national authorities by either removing or watering down their obligations, for instance, on the aspect of reporting or cooperation with other authorities.

**Ghana**
✕

In October 2022, TFS delivered the Republic of Ghana National Artificial Intelligence Strategy 2023-2033 with our partners: Ghana's Ministry of Communications and Digitalisation and Data Protection Commission, GIZ FAIR Forward and Smart Africa. The strategy is based on 40+ local stakeholder consultations, in-depth AI policy landscape mapping and SWOT Analysis of Ghana's AI ecosystem, and 4 high-level public sector consultation workshops to iterate the mission and vision, recommendations and action plan, and a detailed booklet of AI use cases across key sectors. However there was no information regarding regulation.

**India** ✕

Currently, India has no codified laws, statutory rules or regulations, or even government-issued guidelines, that regulate AI per se. The obligations on this subject are set out in the Information Technology Act 2000, and the rules and regulations framed thereunder.

## South Korea

On February 14, 2023, the Korean National Assembly passed out a proposed legislation to enact "Act on Promotion of AI Industry and Framework for Establishing Trustworthy AI" (the "AI Act"). Now, the AI Act is only a few steps away from the National Assembly's final votes. If passed into law, the AI Act would be the first law to become a statutory foundation that comprehensively governs and regulates AI industry in Korea. Major highlights of the bill are expected as follows.

The AI Act makes it clear that, as a general principle, AI regulations must allow anyone to develop new AI technology without having to obtain any government pre-approval.

The AI Act sets forth certain types of AI that are used in direct connection with human life and safety as "high-risk AI" and requires that such high-risk AI achieve a certain level of trustworthiness.

The AI Act provides support for innovative businesses in the AI industry.

The AI Act provides a statutory basis for establishing "ethical guidelines for AI."

The AI Act sets forth a statutory basis for establishing (i) a "Basic Plan for AI," which will likely serve as a policy roadmap for developing AI technology in Korea and (ii) an "AI Committee" supervised by the Prime Minister.

## Hong Kong

There is currently no authority designated to monitor the use and development of AI in Hong Kong. As far as the collection and use of personal data in the course of training or operating AI is concerned, the PCPD is the authority responsible for enforcing privacy law in Hong Kong.

## Australia

The country is making progress on the main goals of its 2021 AI Action Plan: it launched its National AI Centre at the end of 2021. In 2022, the country passed the Data Availability and Transparency Act, which created a National Data Commissioner and established a system for sharing public sector data which could improve AI readiness.

**Australia also has 8 AI Ethics Principles to ensure AI is safe, secure and reliable.**
